

# RapidGP™

## GamePad interface for ProductView 9.1

RapidGP provides a Game Pad interface for standalone ProductView Lite and Professional Clients that is configured to support the cordless Logitech Rumblepad II (or equivalent) GamePad.

RapidGP can be used during presentations and design reviews, especially in conjunction with large screen displays where users may not be sitting at a keyboard and control needs to be passed from one user to another.

All ProductView features are maintained and embedded within RapidGP.

One or several GamePads may be connected to one session of ProductView, in addition to the regular keyboard and desk-top mouse.

Controls are intuitive with interactions mapped in a similar way to other GamePad applications and extended to support ProductView.

### Requisites

Runs on Windows platforms only.
