

Visual Advantage International Ltd. Introduces VAView™ For PTC® Creo™ View™ in Windchill® environments.

VAView enables the development and deployment of Visual Advantage applications and custom solutions based on Creo View in Windchill and standalone environments.

Bristol, UK- June 2011. Visual Advantage, an independent developer of products and services for PTC Visualization solutions, announced today that it is releasing VAView, its framework for deploying visualization solutions based on Creo View MCAD, especially when used with PTC's Windchill based solutions. Visual Advantage is also launching its first application for this frame-work, VAView/Cache.

The VAView framework is deployed centrally from PTC's Windchill and complements PTC's Windchill and Creo View solutions by providing additional capabilities. These may be Visual Advantage applications or customized applications.

The VAView/Cache application provides a means to transparently cache Creo View MCAD data on local workstations to increase subsequent retrieval performance by a significant factor, while also reducing network traffic and Windchill server loading.

"VAView/Cache is the first in a set of performance enhancing services for Creo View MCAD under development at Visual Advantage" states Chris Davis, managing director at Visual Advantage. "These are implemented using PTC's Creo View Toolkits and build upon Visual Advantage's background across visualization and optimized data management solutions."

Dr Michael Rygol, Vice President, Product Development, Visualization Products, PTC, added: "We are delighted that Visual Advantage, a longstanding Visualization Partner, continues to provide complementary solutions to PTC's visual collaboration and digital mockup solutions."

About Visual Advantage

Visual Advantage (www.visual-advantage.co.uk) has gained extensive expertise with PTC visualization solutions over the past 20 years, offering an extensive range of products and services to extend their functionality, integration, and performance. Visual Advantage is based in Bristol, UK, and operates world-wide with customers including: Airbus, Volvo Trucks, TACOM, Lawrence Livermore National Labs (National Ignition Facility). Visual Advantage is a Gold level PTC PartnerAdvantage™ Partner.
